

Sailor Street update

As most of you know, the concrete contractor has finished placing concrete curb and gutter throughout the project and started working on driveways. The concrete crew had other projects that they needed to move onto for the rest of this week and weather conditions are really colder than desired for concrete placement anyway. In the meantime, Holtmeier will be working on the project tomorrow through Monday, leveling and cleaning the site, and prepping streets for paving. As of now, paving is tentatively scheduled for Tuesday November 5th. We expect concrete work to resume shortly after paving is completed and when weather conditions are suitable.

Now that curb and gutter is placed, residents can park on the graveled streets in front of their house. During the day on Thursday, Friday, and Monday, while Holtmeier is grading and prepping the streets, residents will need to park offsite or be able to move their vehicles when asked throughout the day. Please let me know if you have any questions.
